

Shahid Raza

Full-Stack Developer — Backend Engineer
razashahid532@gmail.com — +91 72777 51253
LinkedIn — GitHub

Professional Summary

Full-Stack Developer with 3+ years of experience building SaaS platforms and scalable microservices. Skilled in backend architecture, database optimization, frontend development, and integrating AI/LLM capabilities. Experienced in designing REST APIs, implementing real-time features, and delivering production-ready applications.

Work Experience

NewAgeSys Solutions

Full-Stack Developer — Nov 2025 – May 2026

- Architecting scalable backend services using Node.js, NestJS, and TypeScript supporting 50+ API endpoints for multi-tenant ERP and SaaS platforms
- Designing RESTful APIs with PostgreSQL, MongoDB, and Redis; reduced database query latency by 35% through indexing and caching optimization
- Implementing event-driven architectures with RabbitMQ/Kafka for asynchronous job processing, improving throughput by 25%
- Developing responsive frontend modules with Next.js and React; achieving 90+ Lighthouse performance scores
- Optimizing data layer with strategic caching patterns resulting in 40% reduction in API response times

TechwareLab

Software Developer — Apr 2023 – Oct 2025

- Built 15+ microservices using Node.js, NestJS, Java (Spring Boot), and Go; achieved 99.5% uptime in production
- Optimized database queries (PostgreSQL, MySQL, MongoDB) reducing API latency by 40% and cutting database load by 30%
- Designed real-time systems using Redis Pub/Sub and WebSockets, handling 10K+ concurrent connections
- Implemented RESTful and GraphQL APIs with comprehensive input validation and error handling via Zod; improved data integrity by 45%
- Collaborated on 6+ cross-functional projects with React, Angular, and Next.js teams; mentored 2 junior developers on backend best practices

Notable Projects

Booking.go — Multi-Tenant SaaS Booking Platform

Production SaaS platform enabling salons, clinics, and gyms to manage bookings (50+ API endpoints, 3+ databases):

- **Backend Architecture:** Designed layered REST API (Route → Service → Repository) with PostgreSQL, MongoDB, Redis; implemented optimistic locking to prevent double-booking under concurrent load
- **Real-time Features:** Socket.IO for messaging, FCM push notifications, calendar integrations (Google/Apple/Outlook), Ollama LLM integration for AI chat assistant
- **Frontend:** Next.js 15 + React 19 with role-based portals (owner/customer), TanStack React Query for server state, Zustand for local state, dark mode, WCAG accessibility
- **Scaling:** Redis caching reduced slot query latency by 50%; Docker containerization for horizontal scaling; pagination handles 100K+ bookings efficiently

inode — Local-First Semantic Knowledge CLI

Privacy-focused CLI for storing and retrieving notes, secrets, and commands via natural language semantic search:

- **Semantic Search:** Built in Go with vector embeddings and LLM inference for natural language retrieval; auto-classifies content into 9 strict categories (credentials, commands, snippets, runbooks, etc.)
- **Local-First Architecture:** SQLite + sqlite-vec by default (no API keys or internet required); optional PostgreSQL/pgvector, Claude API, and Voyage AI backends for higher-quality results
- **Security:** AES-256-GCM encryption and masking of sensitive values at rest; Ollama for zero-cost local embeddings and inference
- **AI Integration:** Read-only Model Context Protocol (MCP) server for Claude Code and Cursor; cross-platform binaries for macOS, Linux, and Windows

Payment Processing ERP Platform

Enterprise payment gateway system processing 1000+ daily transactions with 99.7% uptime:

- Integrated 4 payment gateways (Stripe, Razorpay, Square) with unified abstraction layer; reconciliation logic reduced transaction errors by 28%
- Optimized transaction processing by implementing batch aggregation and Redis caching; improved settlement time by 35%
- Built React + Node.js dashboard for monitoring payments, fraud detection, and reconciliation reports
- Designed comprehensive audit logging using MongoDB for compliance; all transactions fully traceable and recoverable

Activity Analytics Platform

Real-time event processing and analytics system tracking 50K+ daily events:

- Built Node.js API layer with Kafka for event ingestion, MongoDB aggregation pipelines for analytics; reduced reporting query time by 60%
- Implemented distributed tracing (structured logging) for observability; root cause analysis time dropped from 4 hours to 15 minutes
- Designed data retention policies achieving 40% storage cost savings while maintaining 12-month historical analytics
- Created real-time dashboards with React and WebSocket connections for instant metric updates

Technical Skills

Languages: JavaScript, TypeScript, Go, Java, HTML5, CSS3

Backend Frameworks: Node.js, Express, NestJS, Spring Boot

Frontend: React, Next.js, Angular, TanStack React Query, Zustand, shadcn/ui

Databases: PostgreSQL, MySQL, MongoDB, Mongoose (NoSQL expertise)

Caching & Real-time: Redis, Redis Pub/Sub, Socket.IO, WebSockets, Message queues

API Design: REST, GraphQL, RESTful patterns, API contracts, Zod validation

Messaging & Events: Kafka, RabbitMQ, Pub/Sub, Event-driven architectures

Generative AI & ML: LLM integration (Ollama), RAG patterns, Prompt engineering, AI chat systems

Auth & Security: JWT, OAuth2, RBAC, Password hashing, Token refresh, Data encryption

UI & Design: Tailwind CSS, shadcn/ui, Responsive design, Dark mode, WCAG accessibility

DevOps & Infrastructure: Docker, Docker Compose, Git version control, CI/CD pipelines, Linux

Cloud & Services: Firebase, Google Cloud, FCM push notifications, Nominatim geolocation

Architecture & Patterns: Microservices, Distributed systems, Layered architecture, Optimistic locking, SOLID principles

Development Practices: Agile/Scrum, TDD, API documentation, Performance optimization, Database indexing

Education

Master of Computer Applications (MCA) — Cochin University of Science and Technology (2021–2023)

Bachelor of Computer Applications (BCA) — Nalanda Open University (2017–2021)

Certifications

Backend Spring Boot Cohort — Algomcamp (2025)

Backend Engineering Cohort — Airtribe (2024)
